June 2016- March 2017

Paavendhar Matric.Hr.Sec School-65.7%

PROJECTS

Recommendation System-Built Using Machine Learning

It works by the user's demands and while taking into account their interests, this system can give them the information they need. A more thorough analysis of the data is required to provide better recommendations

Recipes Project-Built Using Of Django

Define Django models for key entities like recipes, ingredients, and users (for authentication), specifying their fields and relationships.

Students Management(CURD)- Built Using Python and SQL

Develop a Python backend application that connects to the database, providing functions to Create, Read, Update, and Delete student records, using libraries like SQLAlchemy for database interaction.

Ecommerce Website-Built Using HTML,CSS and JavaScript

Create an eCommerce website using HTML, CSS, and JavaScript. HTML for structure, CSS for styling, and JavaScript for interactivity. Include product listings, shopping cart functionality, and checkout process. Ensure responsiveness for various devices.

Sales Dashboard- Built Using Excel

Create a Sales Dashboard in Excel. Utilize pivot tables, charts, and conditional formatting to visualize sales data. Include key metrics, trends, and filters for easy analysis. Customize visuals and add interactivity for a comprehensive overview of sales performance.

SKILLS

Core Python
